HTML Forms - Practice Question

Basic level | Write the code in a text editor and open it in a browser

Scenario

You are a junior web developer at **Green Valley College** in Bangladesh. The admission office wants an online **Student Registration Form** so that new students can enter their details on the college website. Your task is to create this form using only HTML.

Question

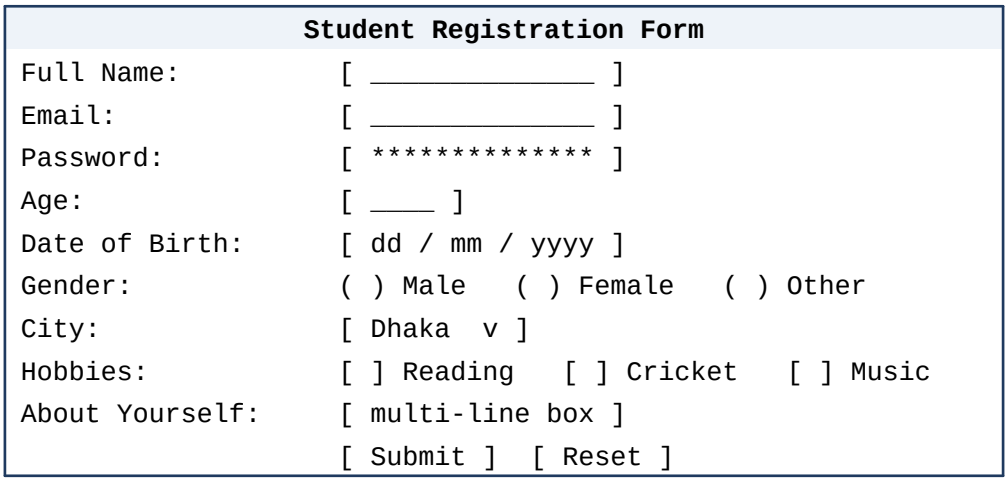
Write the complete HTML code for a page titled **Student Registration Form**. The form must contain the following fields, in the same order:

No.	Label	What the user should be able to do
1	Full Name	Type their name (text box)
2	Email	Type an email address (must accept only email format)
3	Password	Type a password (characters must be hidden)
4	Age	Enter a number
5	Date of Birth	Pick a date
6	Gender	Choose only ONE: Male, Female, Other
7	City	Choose ONE from a drop-down list: Dhaka, Khulna, Rajshahi, Sylhet
8	Hobbies	Select ONE OR MORE: Reading, Cricket, Music
9	About Yourself	Write a few lines of text (multi-line box)
10	Buttons	A Submit button and a Reset button

Conditions

- Use the **<form>** tag to wrap all fields.
- Every field must have a proper **label** connected to it.
- Give each input a **name** attribute.
- Add a **placeholder** in at least two text fields (for example, Full Name and Email).
- Make Full Name, Email and Password **required** fields.
- Add a main heading above the form.

Output Sketch (your browser page should look like this)



Tip: Save your file as **registration.html** and open it in Chrome or any browser to check your work.
